

Presentation:

CANADIAN CDMO IN A WORLD DOMAIN OF PHARMACEUTICAL DEVELOPMENT

Presented by: Dr. Boris Gorin, Senior Scientific Advisor, Eurofins Alphora CDMO, Canada.

ABSTRACT:

Eurofins Alphora is a fully-integrated contract development and manufacturing organization (CDMO) that provides broad spectrum of services to support pharmaceutical development. This includes synthetic route scouting, development of technologies and analytical controls to manufacture Active Pharmaceutical Ingredients (API), discovery of new solid forms to enhance bioavailability of API, pre-formulation and formulation studies to enable drug product launch. Specializing on complex, difficult to make small molecules and niche products, Alphora's innovation-driven team has developed hundreds of API related processes and methods. Our range of services covers the developmental requirements from pre-clinical through phase III and to the successful drug product launch and commercial manufacture.
